

MULTI-LINE SCOREBOARDS

A track display solution at a low cost

Hardware does not bring you any money directly. So why, for instance, would you invest in a classic 10 line scoreboard?

Just get a very standard computer, connect it to TV or another display of your choice and let the software do its thing!

This solution is more flexible (You can have as many lines as you want and choose what data you want to display), clearer (characters are bigger and the contrast is better) and cheaper.

TECHNICAL SPECIFICATIONS

Display types: TV screens (standard or HD), LED and LCD boards, retro projectors, video scoreboards

Hardware needed: standard computer

Information displayed: kart number, driver's name, time to beat, last lap time, best lap time, time left, gap and even a color change to reflect driver progress

Character size: this depends on the size of your display

Amount of lines: 5, 10, 15, 20, etc

Scrolling mode: last driver who passes the loop goes on top

1	0.071	0:13:22
